

UOX

Digging through the data with MOOCczar

John Zornig
Andrew Dekker

- Everything about UQx, who we are, etc. :-)

UQx

- Very hard to engage with UQx learners
- Staff and students are disconnected, a bad signal to noise ratio
- Hard to tell how students are progressing
- Which questions are difficult?
- How (and whether) students are actually learning?

Understanding our users?

- An enormous amount of data
- Fantastic for long-term research, not fantastic for current courses
- Very rich data (**every** click), yet very shallow data (every **click**)
- All this data, what does it mean?
- How do we disseminate the data?
 - Internally?
 - To other researchers?
 - To the public?

edX research package

☰ README.md

MOOCczar

A modular system for managing MOOC research data. These systems are in early testing stages, and contributions and feedback is welcome.

Data Analytics Platform

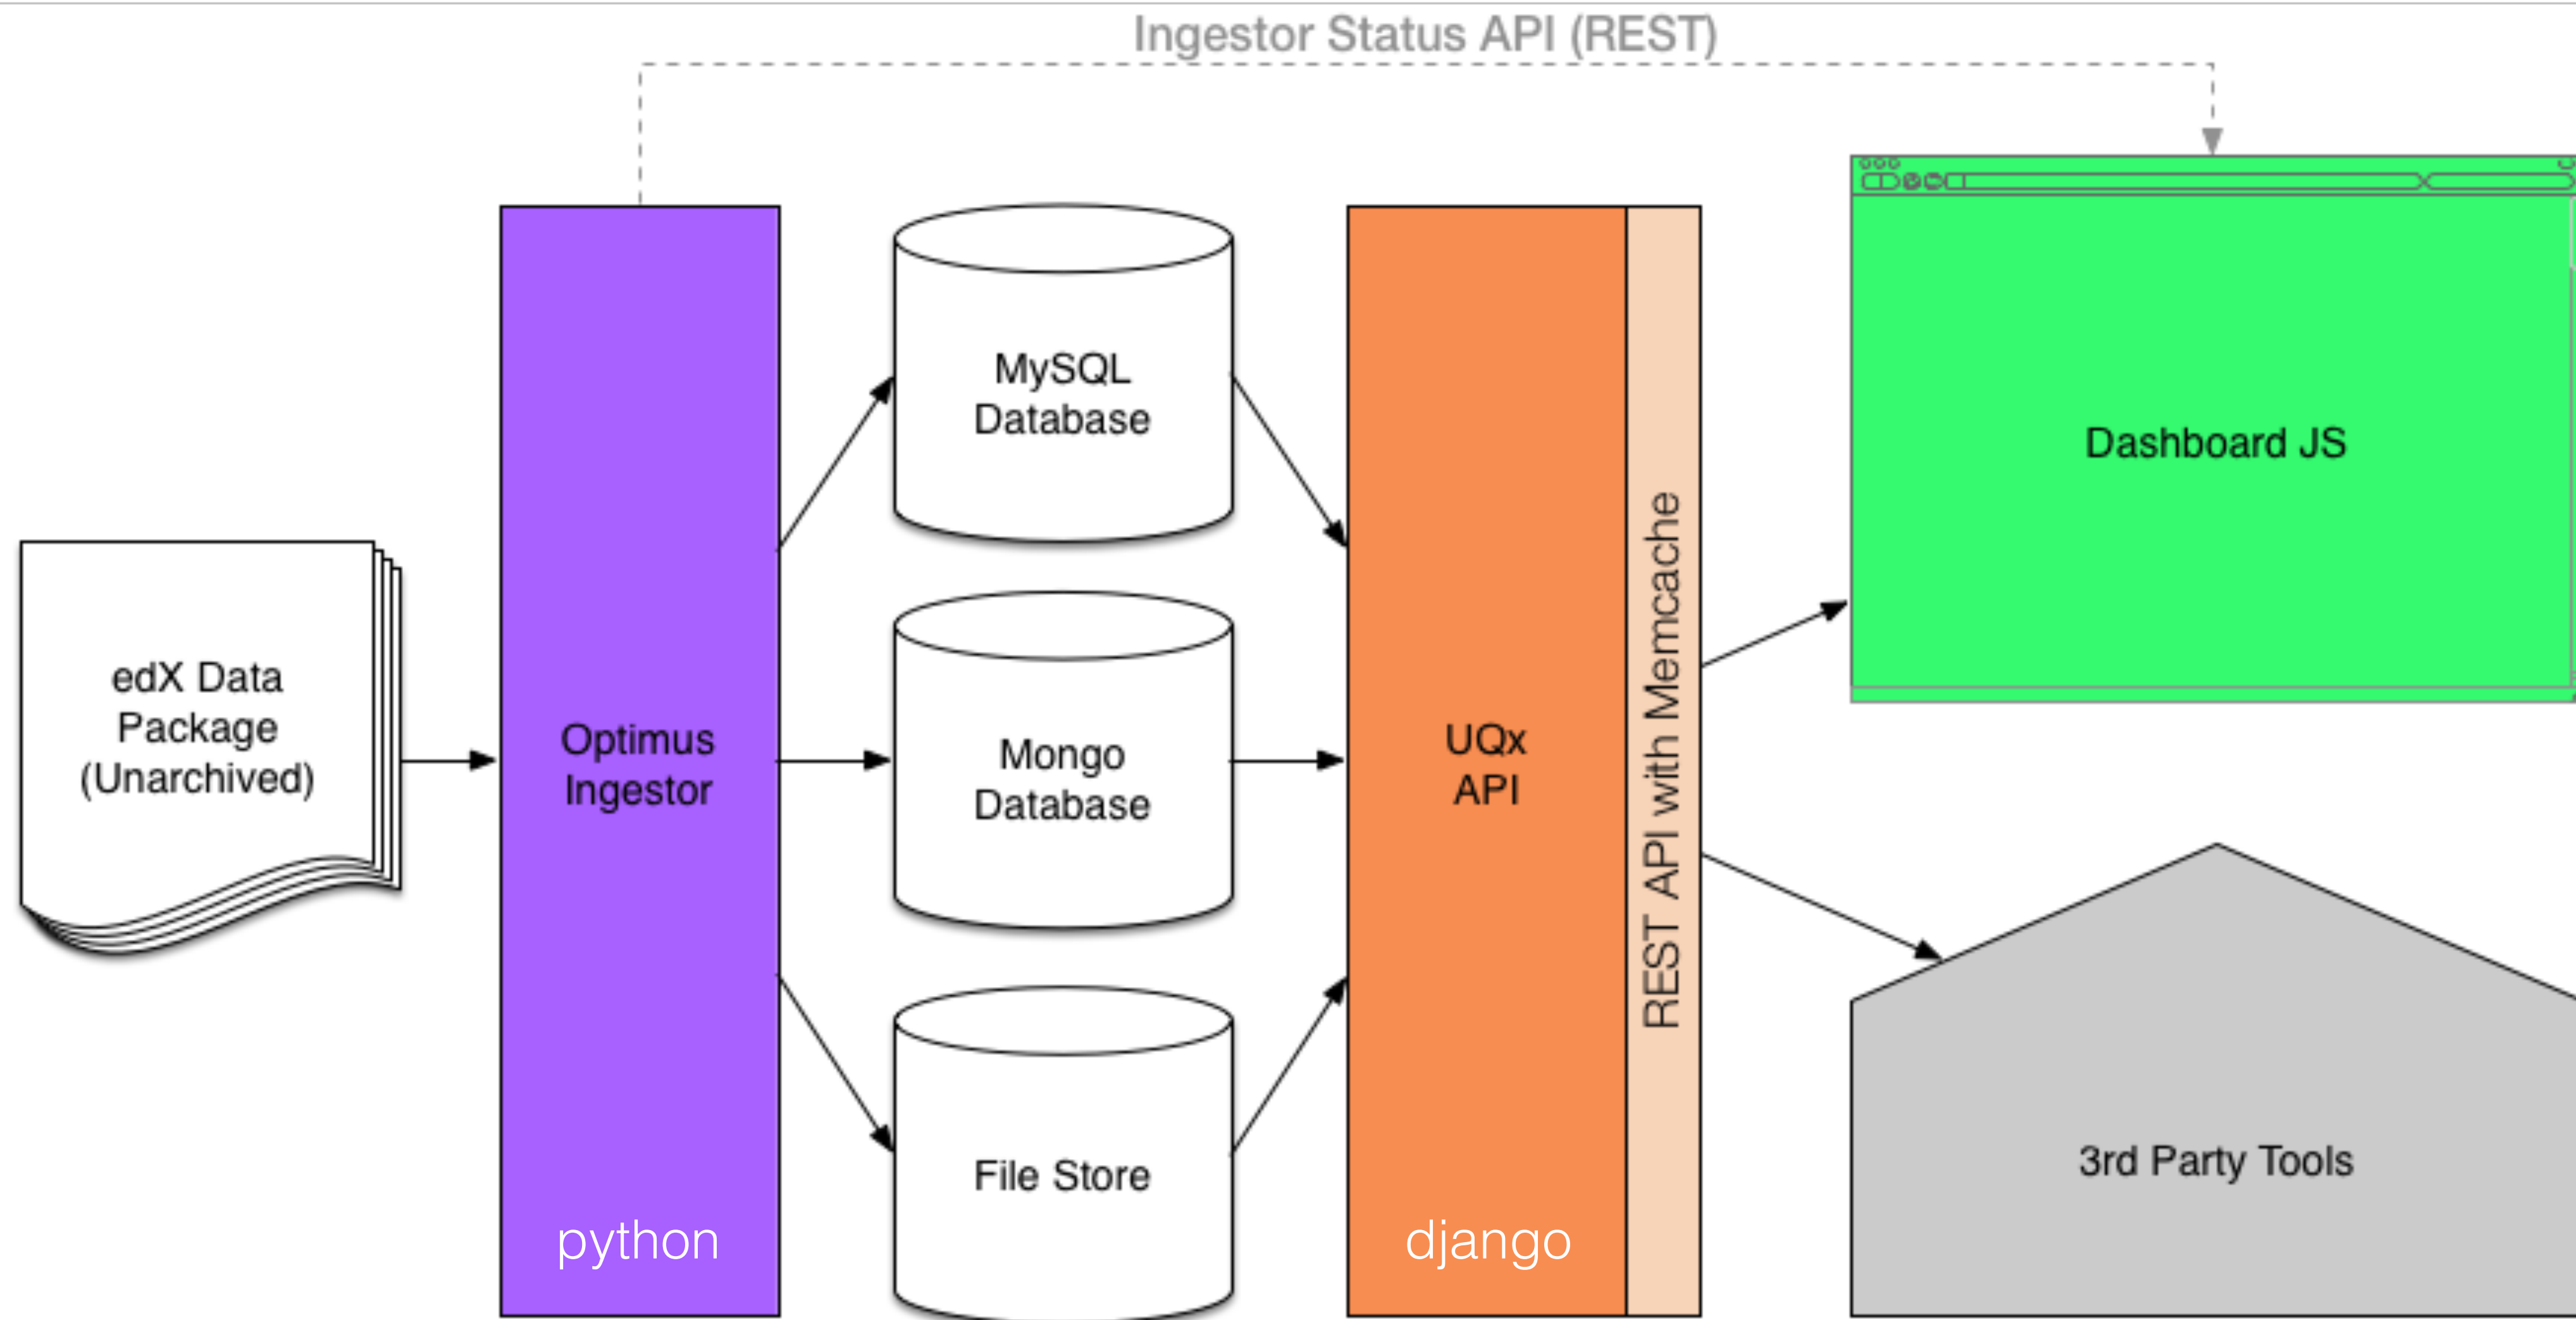

The Data Analytics Platform is a series of services which are used together to provide various access to the [edX Research Data Package](#), and can be used as an API gateway to other data sources. The platform is segmented into three services, each of which work with eachother. Each service is extensible and can be modified independantly of the other services. Contributions are welcome to all of the services. They are best setup in order:

1. Optimus Ingestor - https://github.com/UQ-UQx/optimus_ingestor (ingests raw data into databases)
2. UQx API - https://github.com/UQ-UQx/uqx_api (provides REST endpoints to ingested data)

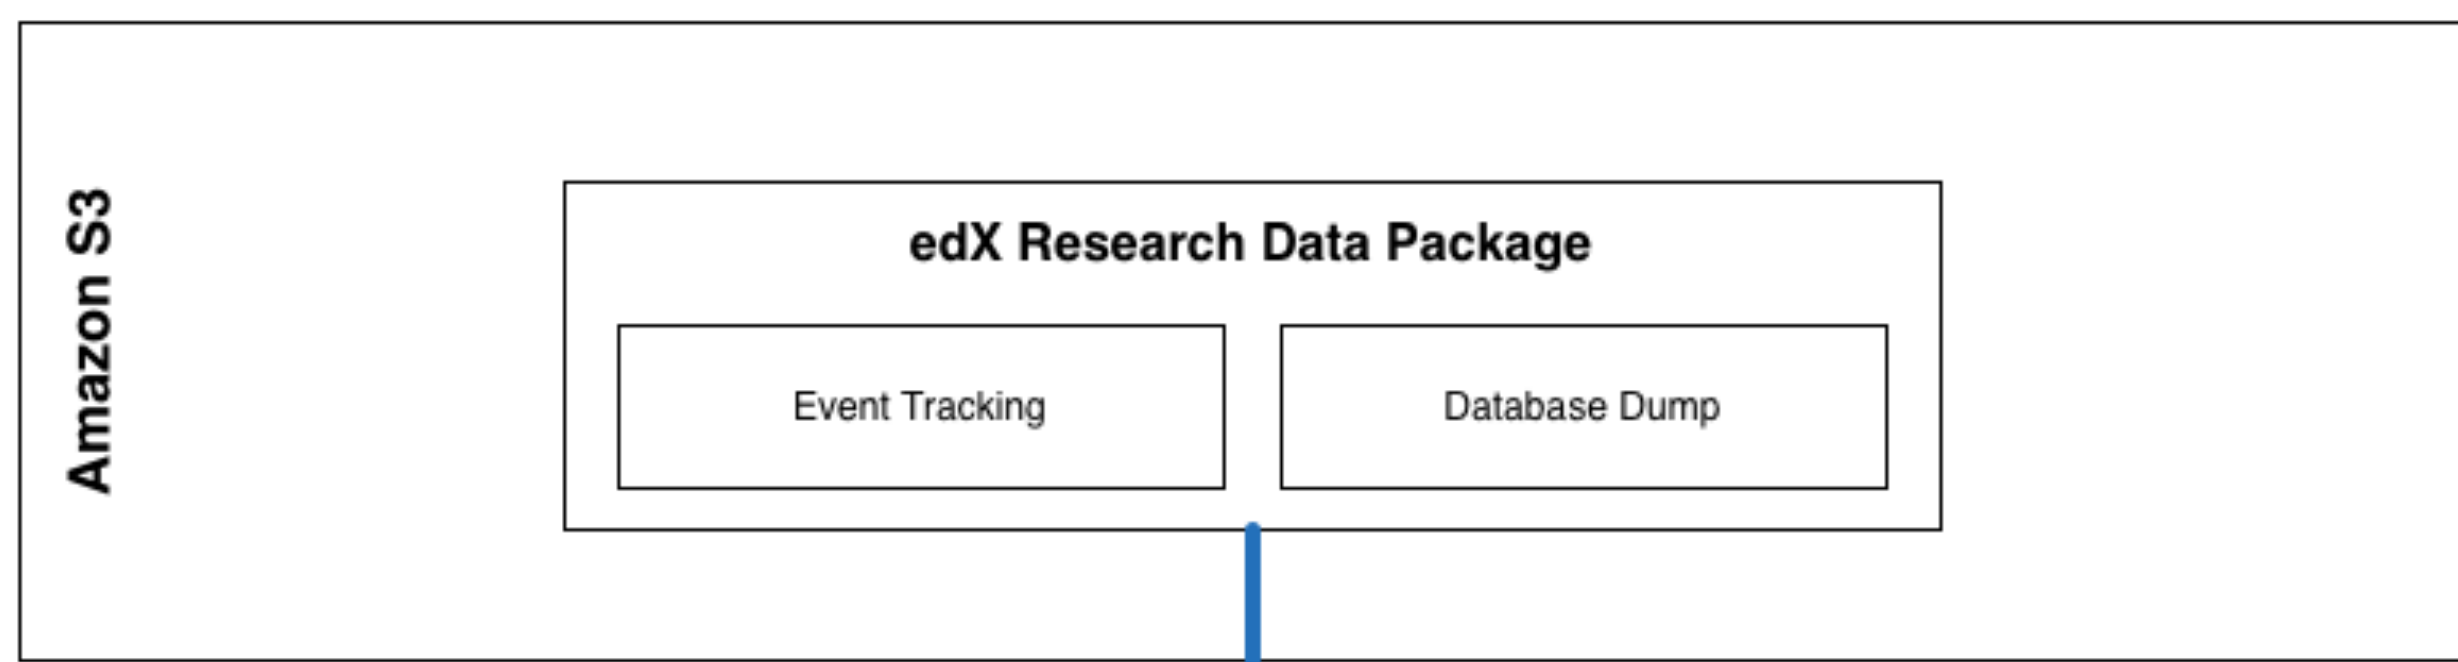

MOOCczar on Github

- Our first step into understanding and structuring our research data
- Architected to be extensible, usable and sharable
- Separation of concerns
 - Ingestor - Structuring the data
 - API - Sharing the data
 - Dashboard - Understanding the data

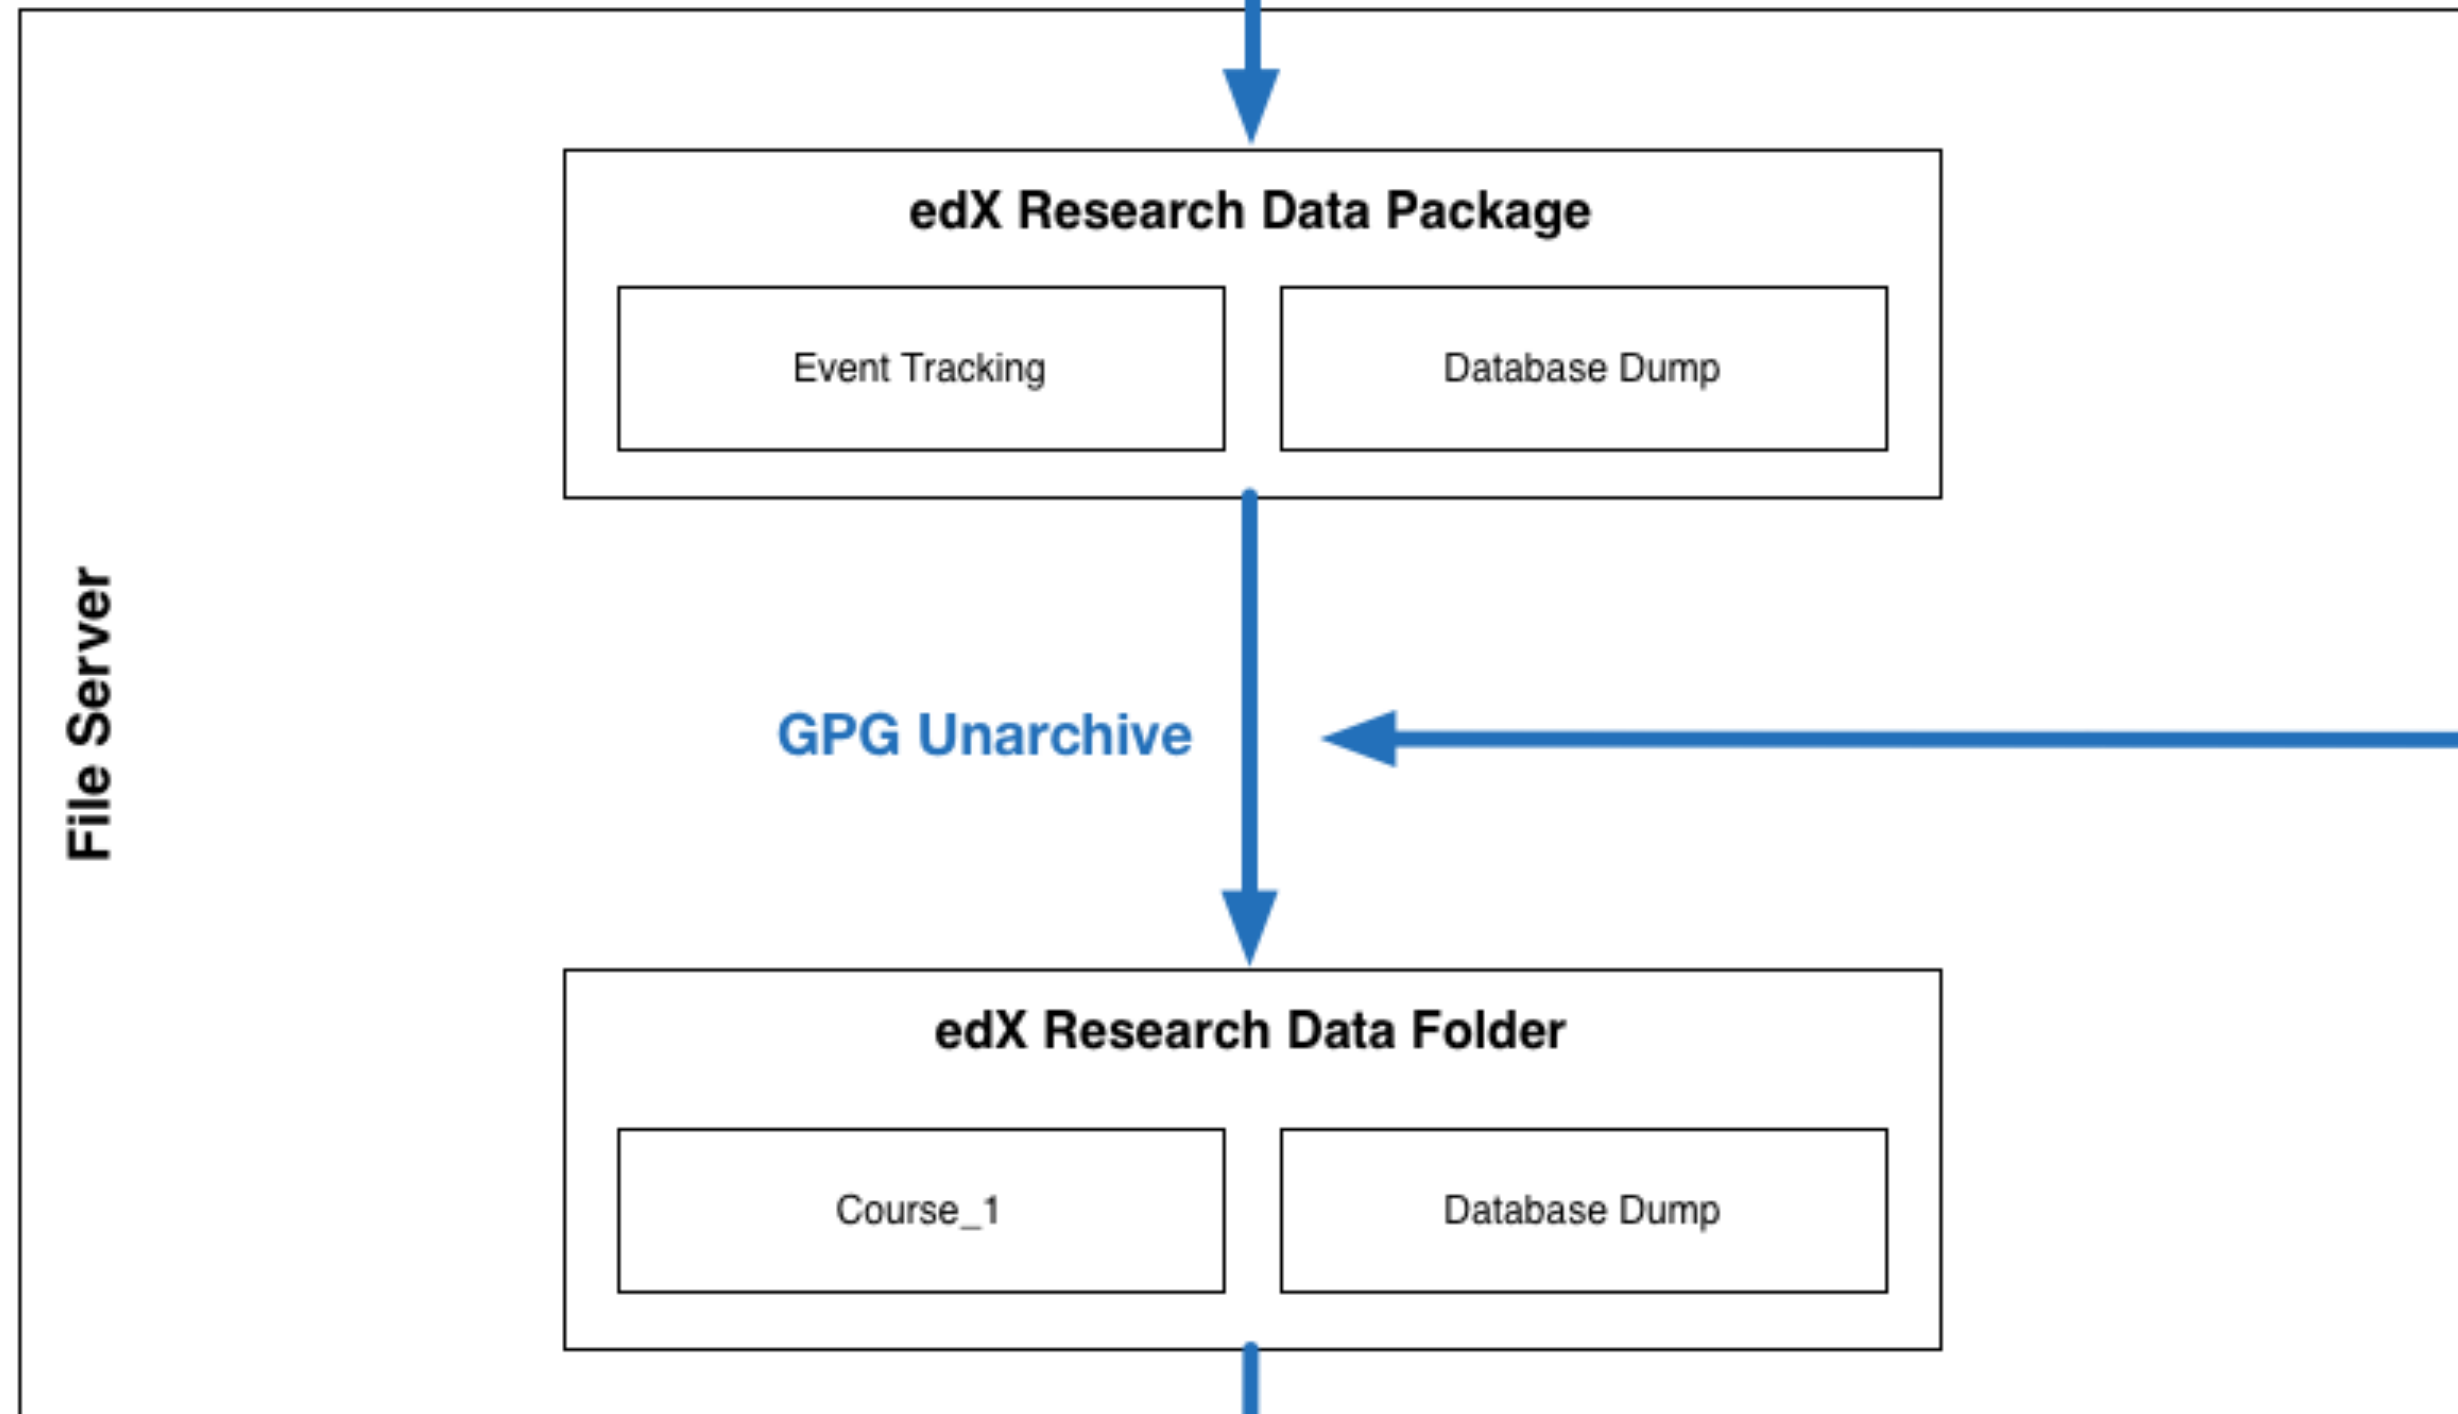

MOOCczar Platform

MOOCczar Platform

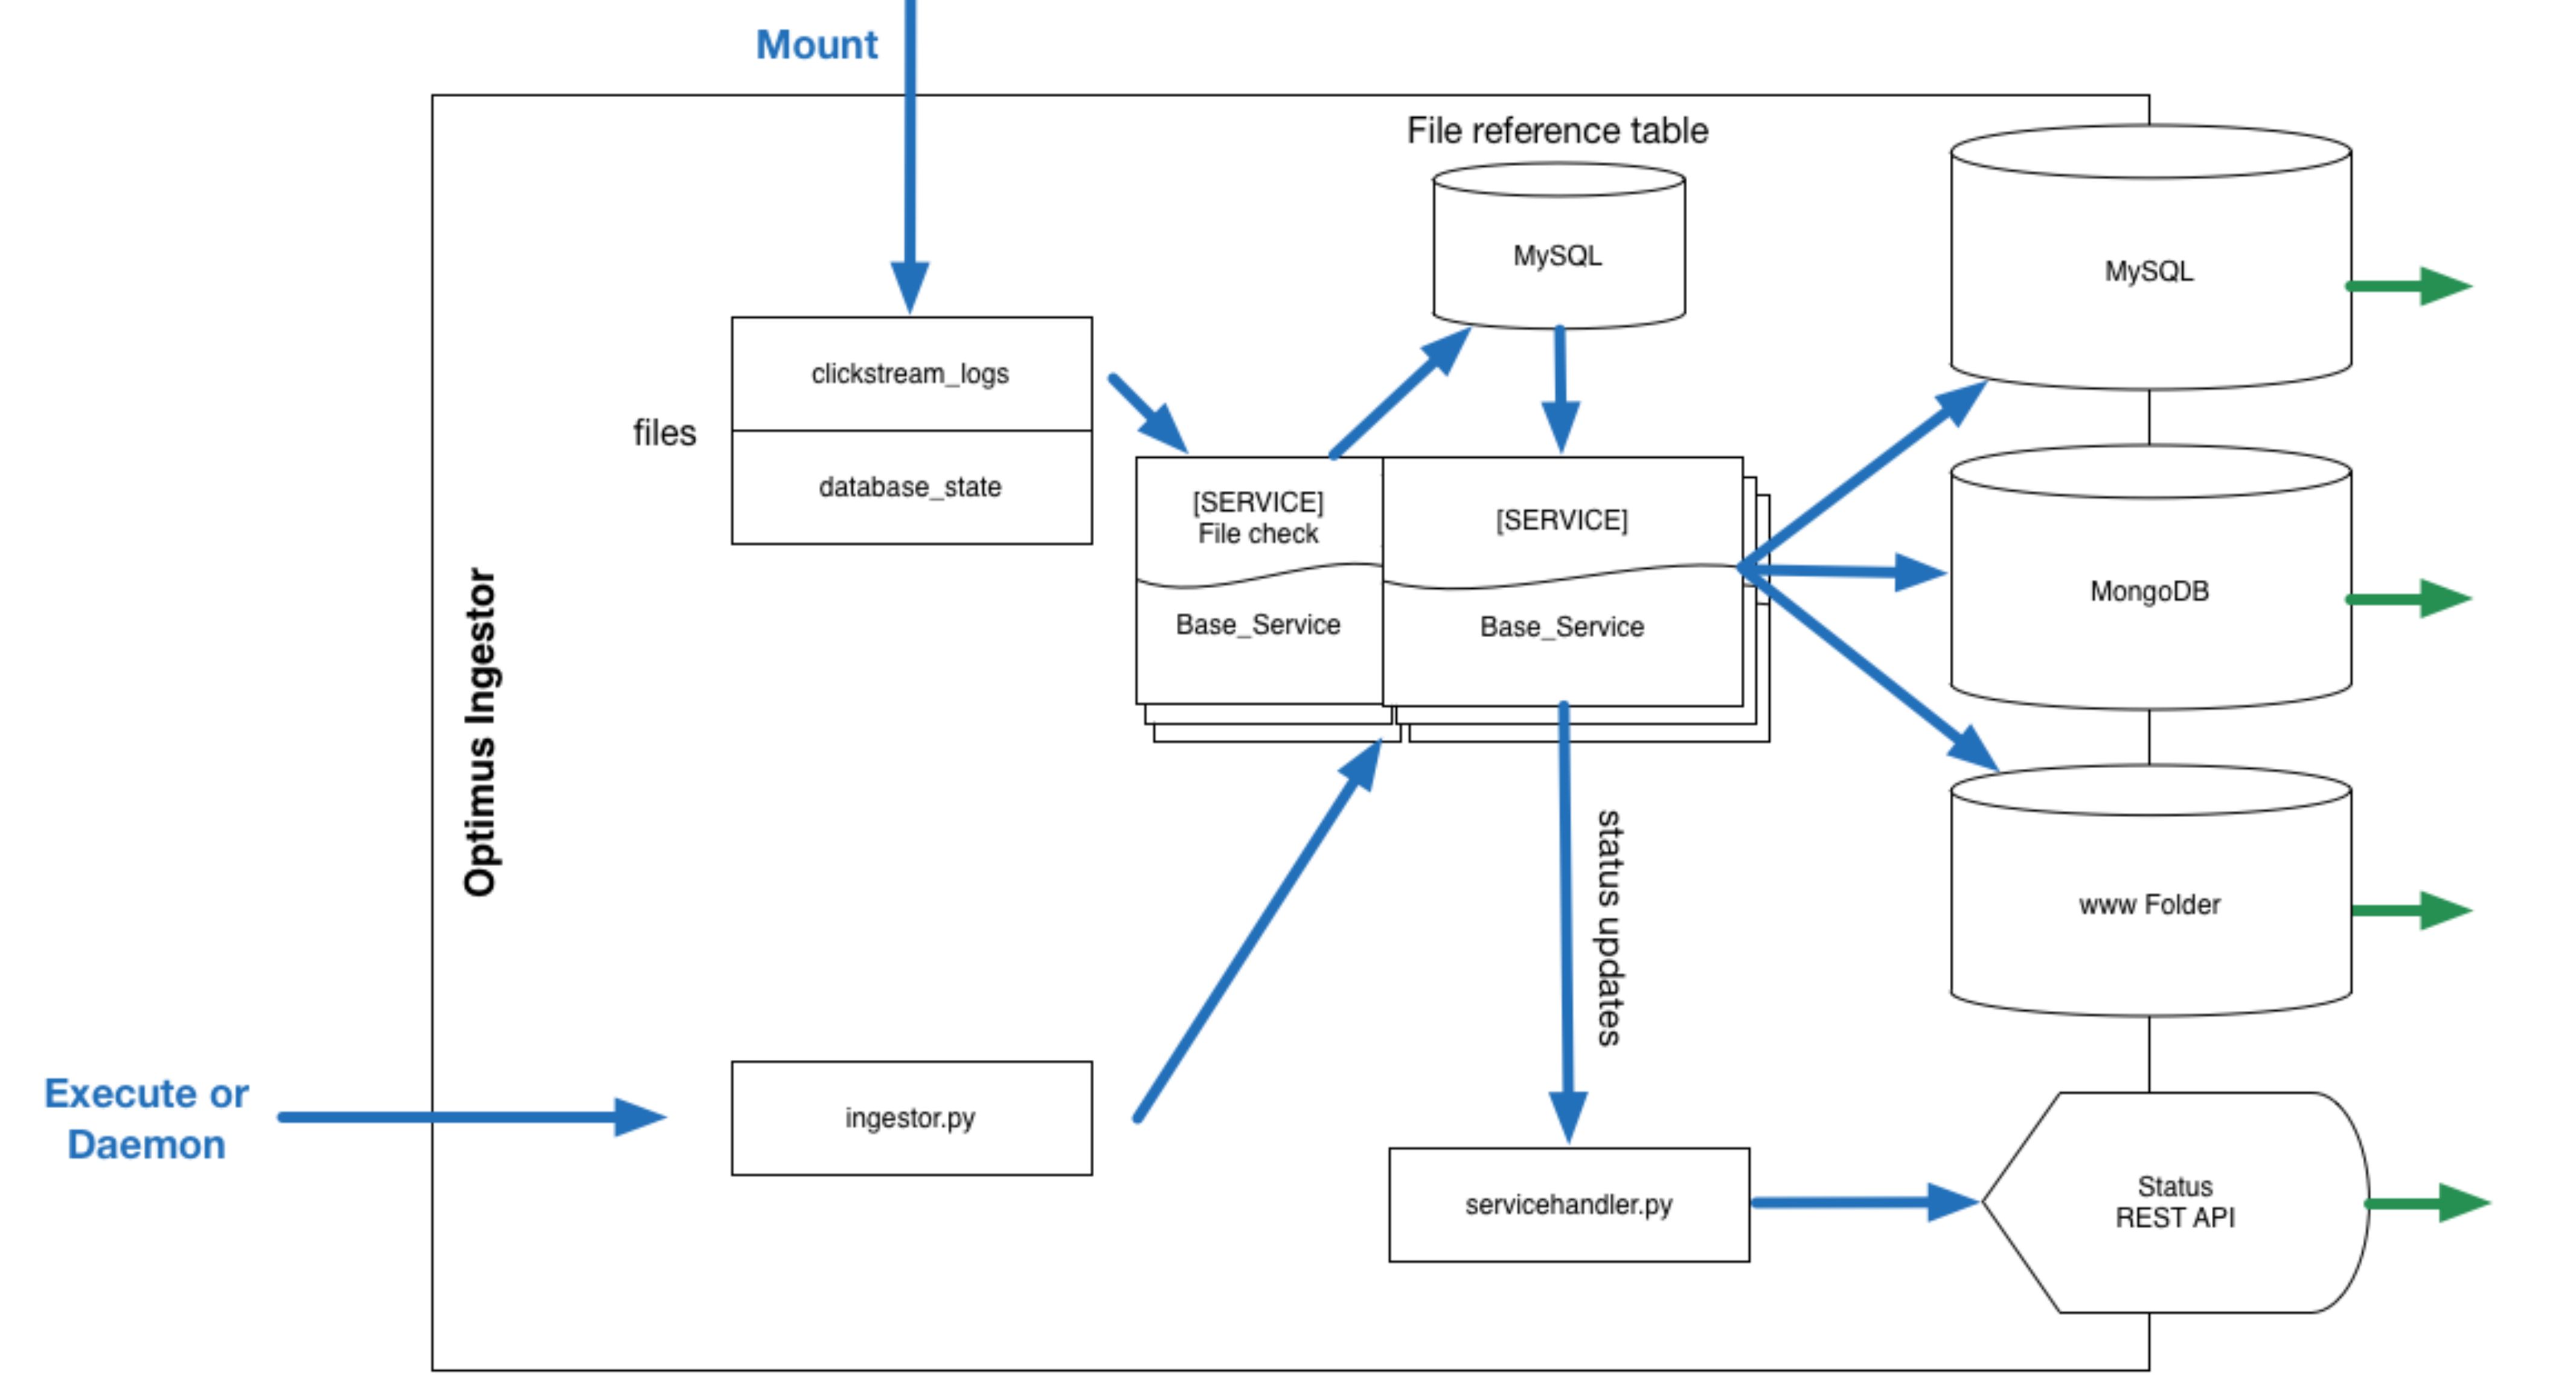

SCP

Mount

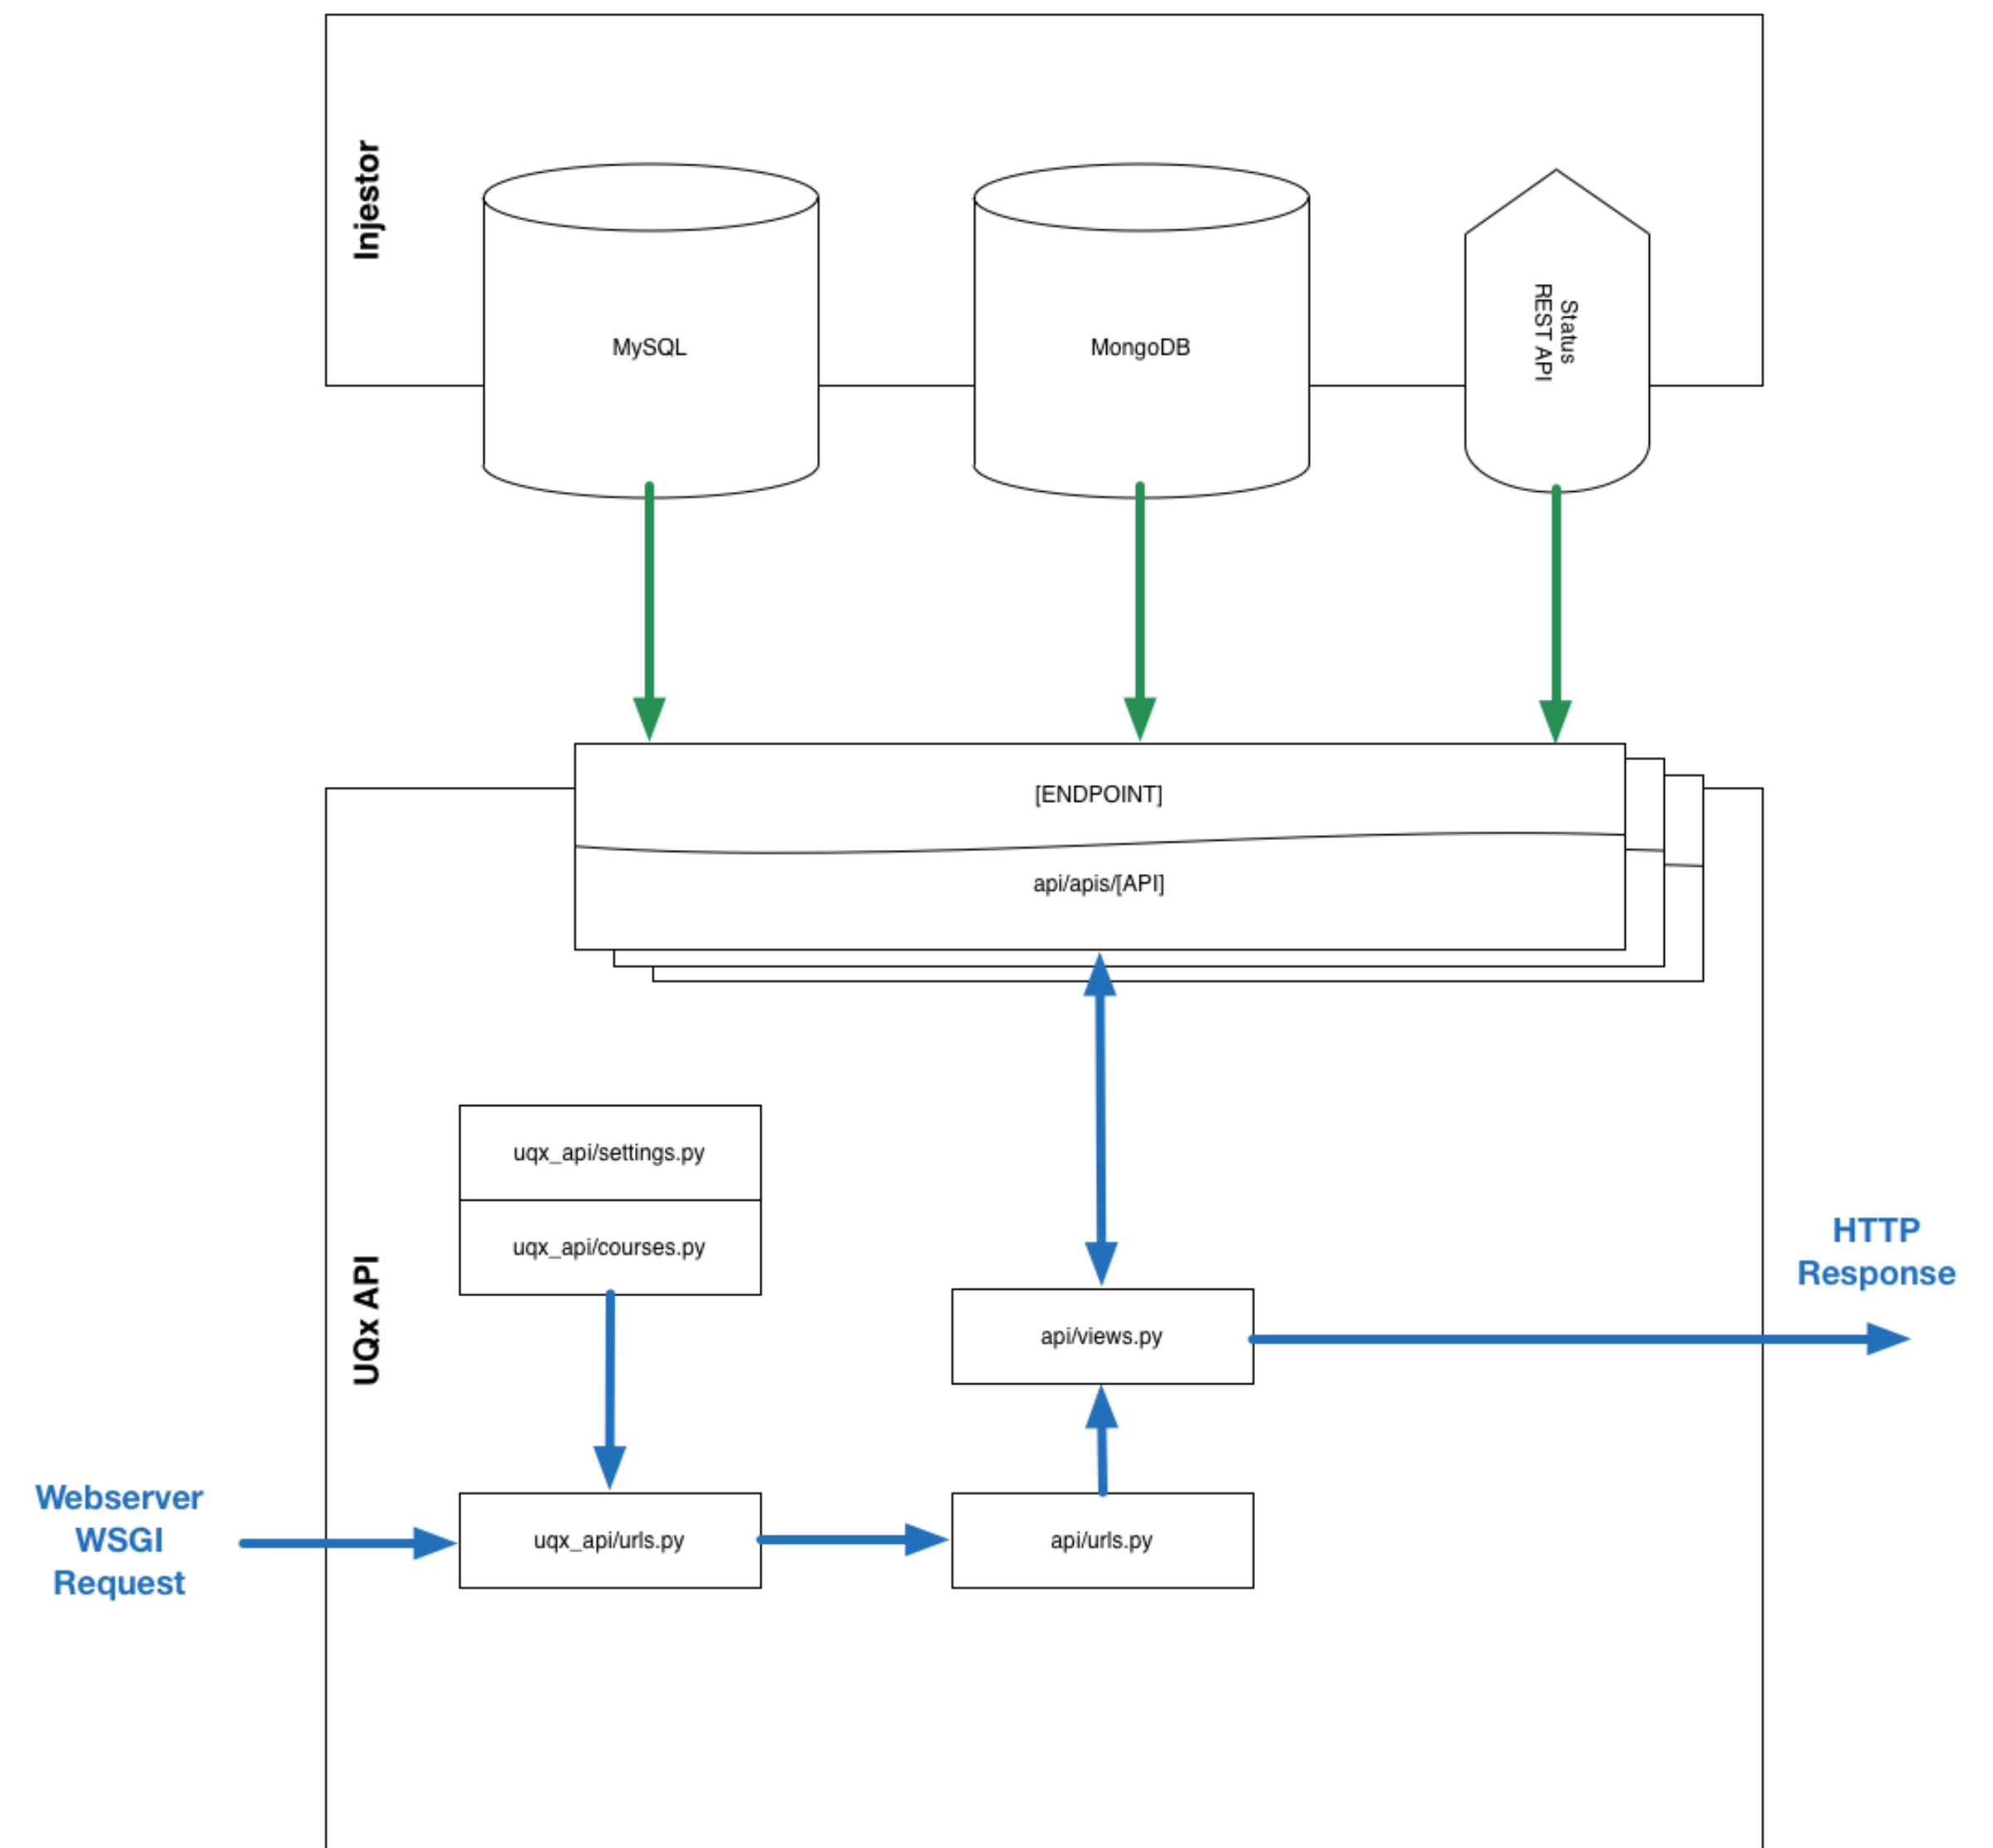

- Uses the edX data package
- Ingests and updates live DBs
- Creates derived data-sets

Ingestor

- Standard REST architecture
- Uses django-rest-framework
- Caching layer included (memcache)
- Built around course JSON file
- Modular authentication (inc. LDAP)

API

- Angular and d3 based dashboard
- Fully client side stack, driven by API
- Modular d3 visualisations
- Course + Visualisation navigation
- Support for embeddable reports
- Provides interface to API caching mechanism

Dashboard

- All Courses
- Enrolments
- Enrolment Map
- Demographics
- Structure
- Active Students
- Certificates
- Discussions
- Discussion Map

Dashboard Reports

- We hope this platform can be helpful to not only us
- Separation of concerns, you can focus on the structure of the data, the sharing of the data, or the understanding of the data
- Constantly evolving with the edX platform
- Digging through the data together

Take-aways

Thank you for your time

John Zornig
Andrew Dekker
